

wiGo: wi-fi for hotels and public places

wiGo provides easy and fast Internet access for everyone... anywhere! Offer your guests Internet access in the comfort of their rooms, around the hotel premises or during a conference break. They will certainly appreciate the service and will think twice before choosing a different hotel.

Fast Internet in the comfort of their room

wiGo services offer a range of benefits both for hotel customers and hotel managers: guests will have access to high-quality services at affordable prices, and managers will be able to offer Internet access in a professional and secure way.

- hotel rooms with full wireless Internet access
- meeting and conference rooms with Internet access 24/7
- wireless access in public areas: business centres, bars, service stations, waiting rooms, hospitals and other areas.

How it works

Accessing the web and other Internet services will be extremely easy for all your customers. All they need to do is turn on their portable device (notebook or laptop or PDA or SmartPhone) and select the pre-existing wireless or wired network. They will automatically be redirected to a customisable welcome page. After entering their login name and password (which they receive upon registration at reception), they can start browsing. Their data will be stored for subscription and payment purposes.

Subscription types

Two subscription types are available:

accessible time the user will have access to the service for the whole duration of the subscription (e.g. one day, two days, one week, etc.)

connected time the user will have access to the service until their total agreed connection time runs out; for example 30 minutes can be used over a period of time (10 minutes on the first day, 10 minutes on another day and 10 on yet another day).

Payment methods

Customers can pay for the service in different ways:

- prepaid system
- billing system
- online payment system for credit card payment

Customers can also check their remaining credit, the traffic used and the total connection time in their user area, where they can also purchase extra traffic.

Other applications: congresses, meetings, trade fairs

In addition to the hotel industry, wiGo services can also be used in conference halls, meeting rooms, exhibition halls, and other buildings where Internet access can be a valuable service for customers.

wiGo's modular structure means it is highly flexible and customisable, and is therefore suitable for a wide range of purposes, e.g. equipping one or more rooms of a small meeting centre with wireless connection services or providing the services for a whole pavilion at a trade fair.

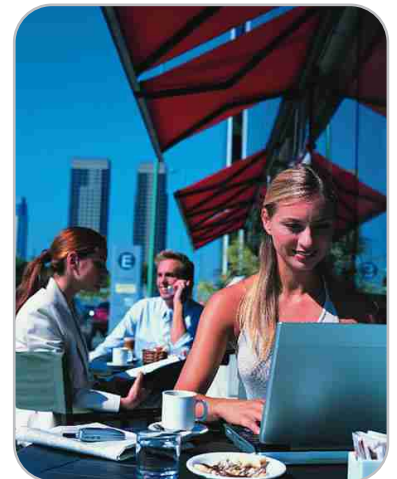

The hardware and software of wiGo have been designed for maximum performance in any condition. In addition, service provision can be easily adapted to meet specific needs.

Technical specifications

- AAA accounting module
- Authentication mode: Radius Server
- Fully independent connection to the Internet (xDSL, ADSL, satellite technology, etc)

The system can be adapted to manage and broadcast multimedia content (TV streaming) over IP networks via:

- Multicast router: it receives multicast content from an external source and routes it to the intranet
- CoD gateway: for the management and definition of local storage areas for on-demand content

Broadsat Experience Web Power!

- The first OPENSKY™ provider in the world
- Valuable experience in high-quality customer support, highly valued by our customers
- The technological partner you can always rely on
